All public tests listed above were on PC. Dates are the testing windows recorded by G.Round. MONOWAVE was a private PC playtest, January 22 - February 22, 2026.

Sources: G.Round testing spreadsheet and Supporter certificate. Contribution ranking reflects G.Points earned through participation, reviews and surveys.

GameTester.gg playtests

Additional testing history from 2024 and 2025

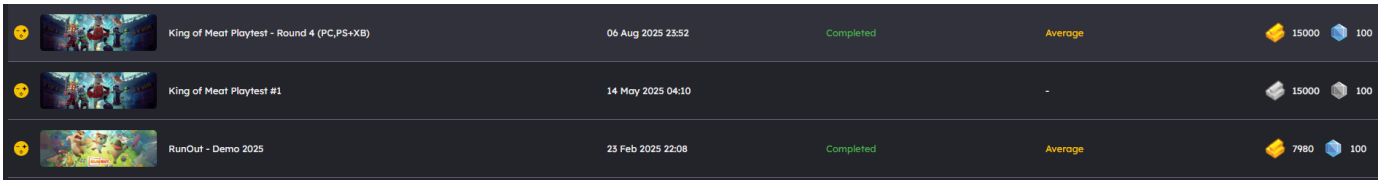

Seven listed test entries across five games. Six entries show Completed; the completion status for King of Meat Playtest #1 is not visible.

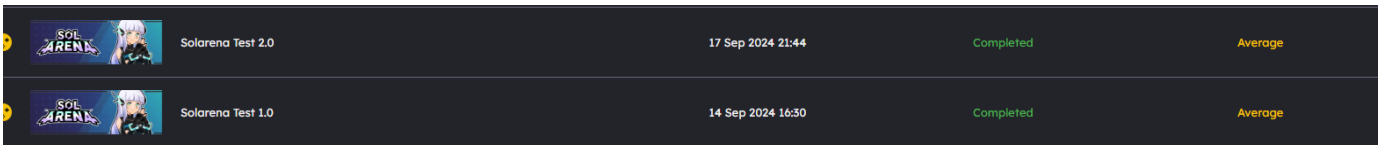

Test history

TEST	DATE SHOWN	STATUS	RATING
King of Meat - Round 4	06 Aug 2025	Completed	Average
King of Meat - Playtest #1	14 May 2025	Not shown	-
RunOut - Demo 2025	23 Feb 2025	Completed	Average
Solarena Test 2.0	17 Sep 2024	Completed	Average
Solarena Test 1.0	14 Sep 2024	Completed	Average
Gems of War Intro Test	19 Apr 2024	Completed	Average
FreeLife SEA Server Test - Group 1	29 May 2024	Completed	Amazing

FreeLife SEA Server Test - Group 1 received an Amazing rating in the platform history.

Platform records

Dates and ratings are transcribed from the supplied GameTester.gg screenshots. The platform label in a test title does not establish which device was used.

Selected reviews

Feedback selected by the game studios through G.Round

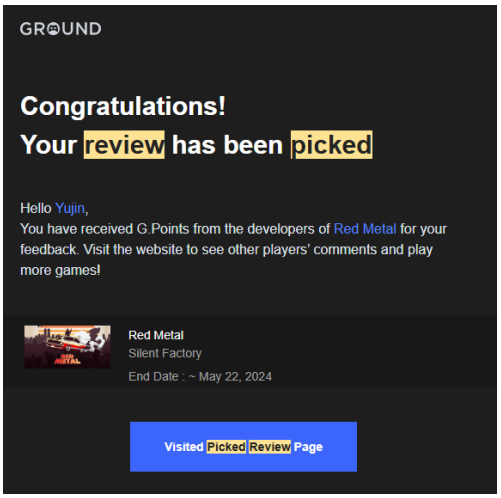

Red Metal - Silent Factory

PC | April 25 - May 22, 2024

Finding: Mission locations sometimes failed to appear, leaving players to search the map without guidance.

Recommendations: Add an objective arrow, improve collision reactions, expand vehicle customization and reward driving tricks.

Other feedback: Weapon variety, vehicle design and music/SFX were identified as strengths.

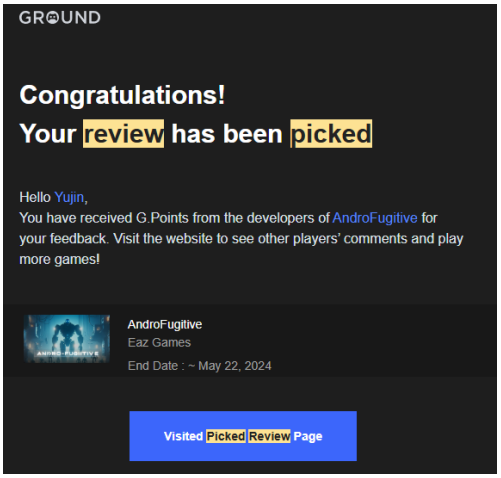

Picked Review notification

AndroFugitive - Eaz Games

PC | April 25 - May 22, 2024

Findings: Continuous dashing appeared possible despite a stated energy cost. Elevator progression on map 3 lacked clear indicators. Danger and missile icons could remain after encounters.

Recommendations: Review dash energy behavior, add progression markers, clear persistent encounter icons and improve dialogue readability.

Picked Review notification

Both reviews were selected by the respective studios. Changes made in response to the feedback have not been confirmed. The certificate records three picked reviews in total; two are shown here.

Bug report: MONOWAVE

Studio BBB | PC testing

Audio distortion when butterfly and character-emotion sounds overlap

Severity and component

Medium | Audio / SFX

Test environment

Platform: PC
Operating system: Windows 11, version 23H2
Game version: v1.2.4-build892
Audio output: HyperX Cloud II stereo headphones

Description

Triggering a character emotion while standing directly beneath a butterfly produces a harsh, loud, glitch-like sound as the effects overlap.

Steps to reproduce

1. Enter a zone containing butterflies.
2. Position the character directly beneath a flying butterfly.
3. Trigger a character emotion using the emote control.
4. Observe the audio when both sound effects play together.

Actual result

The overlapping effects produce harsh audio distortion.

Expected result

The butterfly and character-emotion effects play together without clipping or distortion, with appropriate volume balancing.

Player impact

The noise interrupts gameplay immersion and may cause discomfort when using headphones.

Status: Identified and documented. Resolution not confirmed.
Reproduction frequency: Not recorded.

Report provided by Joe Canag. Environment details refer to the tested build.

G.Round certificate

Issued to Yujin, the testing username of Joe Diadem Canag
